

Provisional estimates indicate that the Gross Domestic Product (GDP) for 2008 amounted to €5.7 billion, an increase of 4.0 per cent over 2007. In real terms GDP went up by 1.6 per cent.

## Gross Domestic Product for 2008

Cut-off date:  
10 March 2009

### The Production Approach

Growth in value added was generated by the following industries: transport, storage and communication; financial intermediation; real estate, renting and business activities; public administration; education and health. Increases were also registered in wholesale and retail trade; quarrying and construction. Remote gaming activities contributed towards increases within other community, social and personal service activities.

Drops in value added were registered in agriculture; fishing; manufacturing, in particular the manufacture of electrical and optical equipment; electricity, gas and water supply; and hotels and restaurants. The generation of GDP by industry is illustrated in Tables 3 and 4.

Increases in Gross Value Added ranged from 7.7 per cent in quarter two to 1.0 per cent in quarter four, compared to the corresponding periods in 2007.

### The Expenditure Approach

This approach indicates that GDP at constant prices went up by 1.6 per cent in 2008, as shown in Table 10. Total final consumption expenditure in real terms rose by 5.0 per cent, whilst Gross Fixed Capital Formation dropped. Real exports and real imports also experienced declines.

Details on developments in Expenditure Approach components of GDP at current prices are shown in Tables 6 to 9.

### The Income Approach

The annual change in GDP at current prices, amounting to €220.2 million, is estimated to have been distributed into a €113.5 million rise in compensation of employees, a €108.5 million increase in gross operating surpluses of enterprises and a €1.7 million drop in net taxation on production and imports, as shown in Table 1.

Compiled by:

**Unit A1: National Accounts**

**Directorate A: Economic Statistics**

### Gross National Income

Considering the effects of income and taxation paid and received by residents to and from the rest of the world, Gross National Income (GNI) at market prices is estimated at €5.5 billion for 2008, an increase of 3.2 per cent over the previous year ■

## Methodological Notes

1. All data in this News Release are in line with the European System of Accounts (ESA95) Manual (ISBN 92-827-7954-8). This system of accounts is mandatory for all EU Member States. The accounts are subject to audit by the European Court of Auditors and Eurostat's GNI Committee to ensure reliability, comparability and exhaustiveness.
2. All data in this release should be considered as provisional and therefore subject to revision.
3. Data users must be aware that the industrial activities of General Government are spread over 11 different NACE categories (at A60 level) and include local councils and extra-budgetary units that are financially dependent on government. NACE 75 is the largest category and in terms of gross value added represents approximately 38 per cent of the General Government sector in 2008.
4. In all tables, data denominated in euro for the 2004-2007 period is arrived at by converting using the fixed exchange rate (Lm0.4293=€1) to the entire series. This is in line with Eurostat's proposal and is done so as not to distort growth rates in Maltese Liri. Figures may not add up exactly due to rounding.
5. The growth rates in Table 10 are derived from changes in seasonally adjusted GDP. Seasonal adjustment of a time-series is undertaken using a software program recommended by Eurostat, which is called Demetra. For further details refer to News Releases 58/2006 and 140/2006.
6. Malta's Gross National Income (GNI) Inventory is a 356-page document containing the sources and methods used for the compilation of the Gross Domestic Product (GDP) and the GNI based on the European System of Accounts (ESA 95). The document is available online: <http://www.nso.gov.mt/site/page.aspx?pageid=344>
7. Government subsidies in favour of Enemalta Corporation have been reclassified as subsidies on products (D.31) from subsidies on production (D.39), since these are given to influence the price at which the output is sold. Subsidies on products are given so that companies charge prices that are lower than their average cost of production as a matter of deliberate government economic and social policy. This reclassification does not affect the aggregate GDP level.

Gross Domestic Product (GDP) is an estimate of the value of goods and services produced in the economy over a period of time. The GDP is estimated at current prices using the Production Approach, aggregating the output of the various productive sectors net of the cost of intermediate inputs. The Expenditure Approach is reconciled with the Production Approach and is used to derive an estimate of GDP at constant prices, in other words, excluding the effects of price inflation on market prices. The Income Approach shows how GDP at market prices is distributed into compensation of employees, operating surpluses of enterprises and taxes on production and imports net of subsidies. GDP per capita is derived by dividing GDP by the average total population (i.e. including residents who are not Maltese nationals) for the period under review.
